X64 Xcelera-CL LX1 Base

PCI Express x1 Frame Grabbers

Key Features

- Image acquisition from Camera Link Base camera
- Supports Camera Link® operations up to 85MHz
- Supports 32/64-bit Windows platforms
- Quarter-length PCI Express x1 Board
- Power Over Camera Link® (PoCL)
 Compliant
- Offers external acquisition control signals on single PCle x1 slot
- ROHS compliant
- Teledyne DALSA Platform
 Development Advantage Free
 Run-time Licensing¹

Advanced PCIe x1 image acquisition

Building on the field proven technology and performance of Teledyne DALSA's X64 frame grabbers, the X64 Xcelera™ Series leverages the PCI Express (PCIe) platform to bring traditional image acquisition and processing technology to new levels of performance and flexibility.

The PCIe point-to-point host interface allows simultaneous image acquisition and transfer with little intervention from the host CPU.

The X64 Xcelera -CL LX1 Base is a cost effective frame grabber based on the PCI Express x1 interface. Fully compliant with Camera Link (V. 1.20) specifications, the Xcelera-CL LX1 supports single Base cameras and can acquire images from a wide variety of multi-tap area and line scan, color and monochrome cameras.

The Xcelera-CL LX1 Base is built within Teledyne DALSA's Trigger-to-Image Reliability technology framework and combines acquisition and external control signals on a single PCIe slot. Trigger-to-Image Reliability leverages Teledyne DALSA's hardware and software innovations to control, monitor and correct the image acquisition process from the time that an external trigger event occurs to the moment the data is sent to the host, providing traceability when errors do occur and permitting recovery from those errors.

Software Support

All of the frame grabbers in the Xcelera series are supported by Teledyne DALSA's Sapera™ Essential software package. Sapera Essential is a cost-effective machine vision software toolkit that bundles board level acquisition and control with advanced image processing capability, featuring 1D/2D barcodes, OCR, pattern finding, color analysis, blob analysis and lens correction tools.

Sapera Essential is designed to deliver the critical functionality needed to design, develop and deploy high-performance machine vision applications while significantly lowering deployment costs.

Teledyne DALSA Platform Development Advantage - Free Run-Time Licensing
The Sapera Essential standard processing tool run-time license is offered at no additional charge when combined with the Teledyne DALSA frame grabbers. This software run-time license' includes access to over 400 image processing functions, area-based (normalized correlation based) template matching tool, blob analysis and lens correction tool.

Some conditions and limitations apply, contact Teledyne DALSA sales for details.

X64 Xcelera-CL LX1 Base PCI Express x1 Frame Grabbers

Specifications*

Function	Description	Function	Description
Board	Camera Link Specifications Rev 1.20 compliant Half length PCI Express 1.20 x1 compliant ROHS Compliant	Controls	Comprehensive event notification includes end/ start-of-field/frame/transfer Camera control signals for external event
Acquisition	Supports one Base Camera Link area and line scan camera Acquisition pixel clock rates up to 85MHz		synchronization Optically isolated TTL/LVDS trigger inputs programmable as active high or low (edge or level trigger)
Resolution	Horizontal Size (min/max): 8 byte/256K bytes Vertical Size (min/max): 1 line/infinite lines for line- scan cameras 1 line/16million lines/frame for area-scan cameras		PC independent serial communications ports provide support 9600 to 11500K baud Appear as system serial ports enabling seamless interface to host applications
	Variable length frame size from 1 to 16 million lines for area-scan cameras Integrated advanced tap reversal engine allows independent tap formatting	Shaft-Encoder Input	Optically isolated quadrature (AB) shaft-encoder inputs for external web synchronization Supports up/down scaling
Pixel Format		Power Output	Power-on-reset fused +12V output @ 1.5A +5V DC output at 1.5A
and Tap configurations	Supports Camera Link tap configurations for 8, 10, or 12-bit mono and RGB cameras: For Base cameras in any of the following combinations: - 3x8-bit/tap, 2x10-bits/tap, 2x12-bit/tap, 1x14-bit/tap, 1x16-bits/tap, & 1x24-bit/RGB	Software	Device driver supports: 32/64-bit OS: Microsoft Windows XP Professional and Windows Vista Full support of Teledyne DALSA's Sapera Essential software libraries Application development using C++ DLLs and
Transfers	Real-time transfers to system memory Intelligent Data-Transfer-Engine automatically loads		.NET components
	scatter-gather and tap description tables from the host memory without CPU intervention	System Requirements	PCI Express 1.10 compliant with one x4 slot system with 64MB or higher system memory
		Dimensions	3.0" (7.5cm) Length X 4.20" (10.7 cm) Height
		Temperature	0°C (32° F) to 55° C (131° F) Relative Humidity: up to 95% (non-condensing)
		Markings	FCC Class B - Approved CE - Approved ROHS - Compliant
