Table of Contents

1. Product Outline

ID4MB-CLIR/ID4MC-CL is a Camera Link (PoCL) interfaced and 4M resolution camera module.
4M pixels CMOS sensor with diagonal length 15.930mm is utilized. Entire pixels can be read out within 1/75s at Medium Configuration output.

Features

- ☐ Global Shutter CMOS sensor is utilized.
- ☐ Camera Link (PoCL) Base , Medium, Full Configuration are supported.
- ☐ Fixed trigger shutter mode, pulse width trigger shutter mode are operable.
- ☐ Full frame rates are as follows.

2Tap Base Configuration	38fps	8bit/10bit
4Tap Medium Configuration*	75fps	8bit/10bit
8Tap Full Configuration	150fps	8bit

*Initial Setting

- ☐ Center Trimming Output Mode

2Tap Base Configuration Center Trimming 1024(H)	149fps	8bit/10bit	Partial Scan 1024(V)
2Tap Base Configuration Center Trimming 512(H)	587fps	8bit	Partial Scan 512(V)

2. Handling Precautions

The camera must not be used for any nuclear equipment or aerospace equipment with which mechanical failure or malfunction could result in serious bodily injury or loss of human life. Our warranty does not apply to dameges or defects caused by irregular and /or abnormal use of the product.
Please observe all warnings and cautions stated below.
Our warranty does not apply to damages or malfunctions caused by neglecting these precautions.

Do not use or store the camera in the following extreme conditions :

- Extremely dusty or humid places.
- Extremely hot or cold places (operating temperature -5℃ to +45℃).
- Close to generators of powerful electromagnetic radiation such as radio or TV transmitters.
- Places subject to fluorescent light reflections.
- Places subject to unstable (flickering, etc.) lighting conditions.
- Places subject to strong vibration.

· Remove dust or dirt on the surface of the lens with a blower.
· Do not apply excessive force or static electricity that could damage the camera.
· Do not shoot direct images that are extremely bright (e.g., light source, sun, etc.), and when camera is not in use, put the lens cap on.
· Confirm the mutual ground potential carefully and then connect the camera to monitors or computers. AC leaks from the connected devices may cause damages or destroy the camera.
· Do not apply excessive voltage. (Use only the specified voltage.) Unstable or improper power supply voltage may cause damages or malfunction of the camera.
· The voltage ripple of camera power DC +12V±10% shall be within ±50mV. Improper power supply voltage may cause noises on the video signals.
· The rising time of camera power supply voltage shall be less than +10V, Max 60ms. Please avoid noises like chattering when rising.

4.2. Power LED

Camera turns on LED light, when it is supplied electricity from the frame Grabber board.
*Power feeding line of CN1 (on Base Configuration connector side) will be connected to the camera internal power input. At this time, power feeding line of CN2 (on Medium/Full Configuration connector side) shall be OPEN. When using at Medium /Full Configuration mode, please contact the frame grabber board manufacturer to make sure that there would be no problem with the above connection.

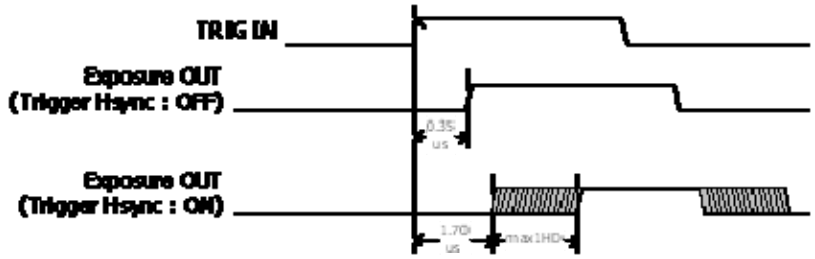
5.10. Fixed Trigger Shutter Mode

☐ This is the mode to start exposure with external input trigger signals, and set the exposure time with serial commands.

☐ Trigger operation is H Sync. V-Sync Rest.
Delay time (Exposure Time Delay) from detecting trigger edge in the camera to starting exposure is 1.70us + max 1HD (Hsync Mode ON) or 0.35us fixed (Hsync Mode OFF).



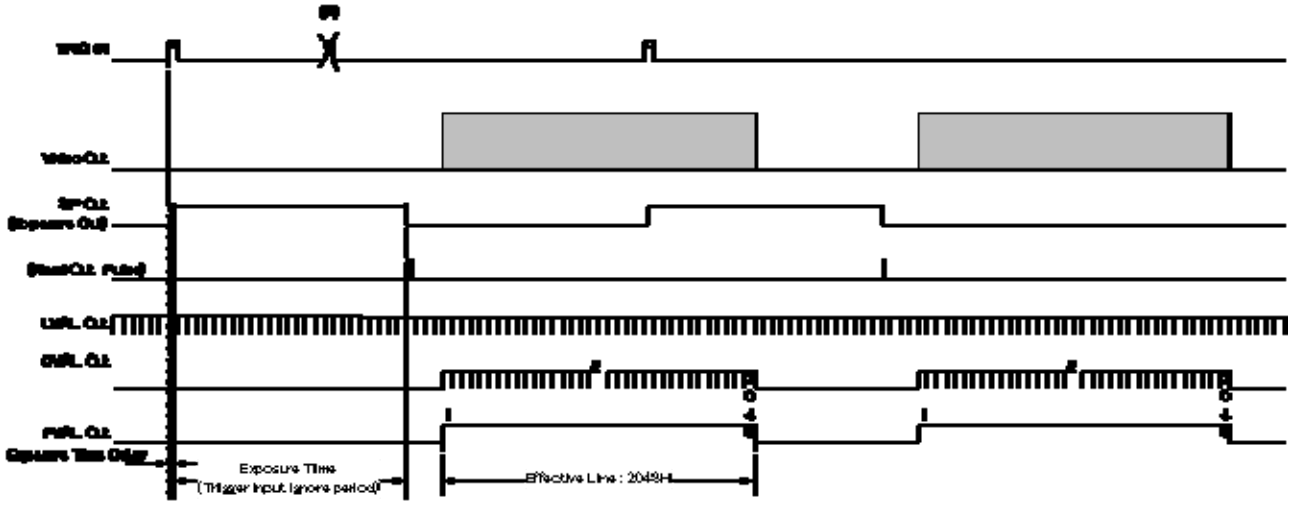
(1) Trigger Hsync Mode ON : 1.70us + max1HD

·2Tap Base Configuration			max 1HD (12.9us)
·4Tap Medium Configuration			max 1HD (6.45us)
·8Tap Full Configuration	1.70us	+	max 1HD (3.225us)
·2Tap Base Configuration Center Trimming 1024(H)			max 1HD (6.45us)
·2Tap Base Configuration Center Trimming 512(H)			max 1HD (3.225us)

(2) Trigger Hsync Mode OFF : 0.35us fixed

☐ Triggers can be accepted even when outputting video signals.
However, trigger signals for exposure to start the next video output prior to the completion of video transmission for the prior video output signals can not be accepted.

☐ Trigger input during exposure time should be ignored. (Refer to the below A)

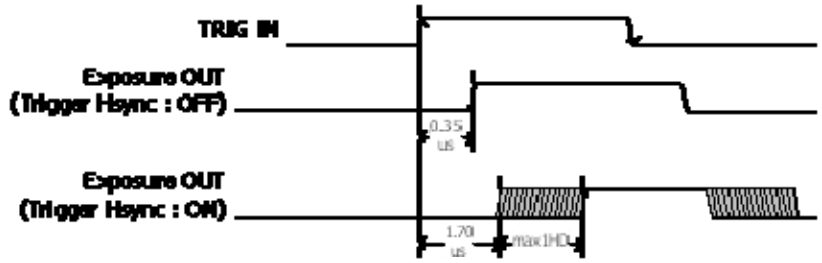


5.11. Pulse Width Trigger Shutter Mode

☐ This is the mode to start exposure with external input trigger signals, and set the exposure time with pulse width of the trigger signals.

☐ Trigger operation is H Sync. V-Sync Rest.

Delay time (Exposure Time Delay) from detecting trigger edge in the camera to starting exposure, and from detecting trigger end edge to completing exposure is Delay time (Exposure Time Delay) from detecting trigger edge in the camera to starting exposure is 1.70us + max 1HD (Hsync Mode ON) or 0.35us fixed (Hsync Mode OFF).



(1) Trigger Hsync Mode ON : 1.70us + max1HD

·2Tap Base Configuration			max 1HD (12.9us)
·4Tap Medium Configuration			max 1HD (6.45us)
·8Tap Full Configuration	1.70us	+	max 1HD (3.225us)
·2Tap Base Configuration Center Trimming 1024(H)			max 1HD (6.45us)
·2Tap Base Configuration Center Trimming 512(H)			max 1HD (3.225us)

(2) Trigger Hsync Mode OFF : 0.35us fixed

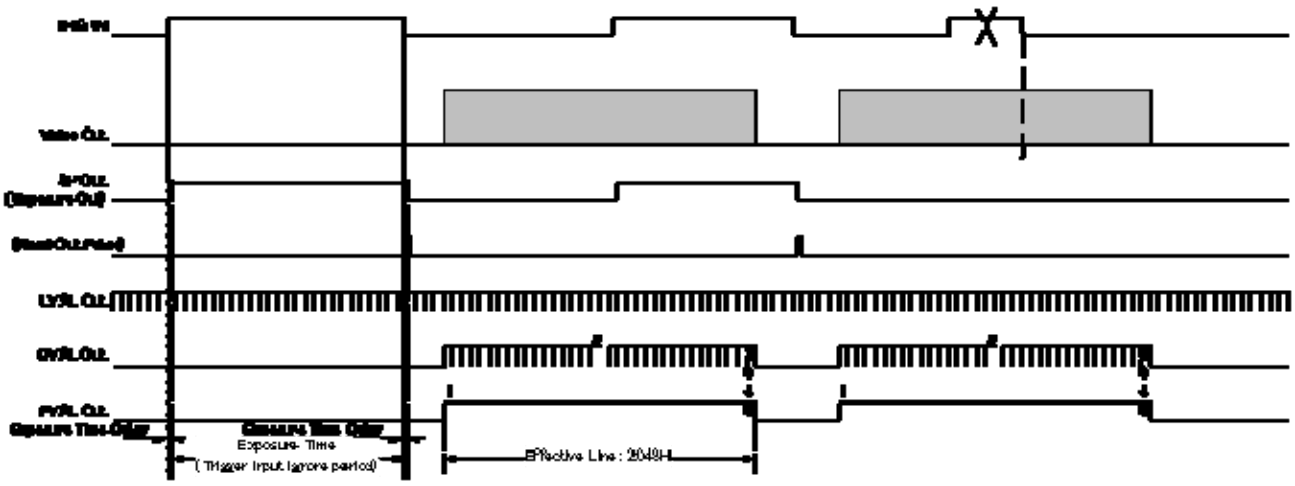
☐ Pulse width is min. 2HD (min) to approx. 2 frames.

Functionally, there is no upper limitation, but noises such as dark noises and shadings may be noticeable at long time exposure.

When the pulse width value is under 16.641us, the exposure time is up to 16.64us.

☐ Triggers can be accepted even when outputting video signals.

However, trigger signals for exposure to start the next video output prior to the completion of video transmission for the prior video output signals can not be accepted.



6. **Center Trimming Mode**

(1) Center Trimming 512(H) Output
(2) Center Trimming 1024(H) Output

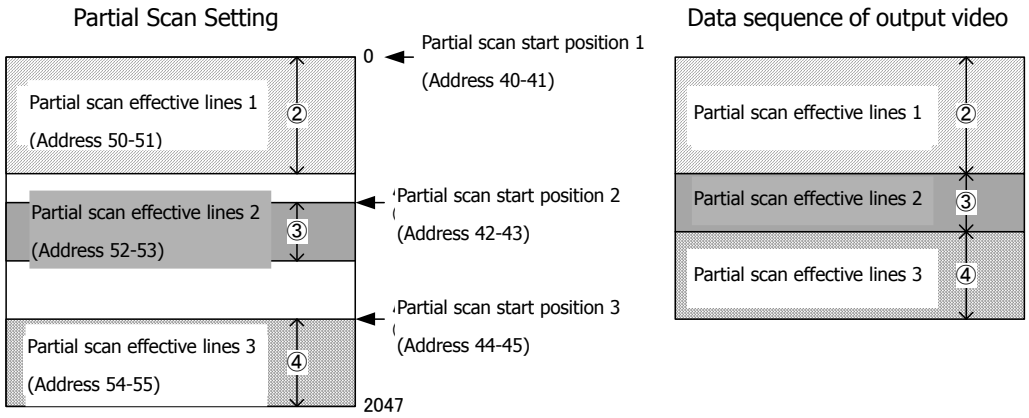
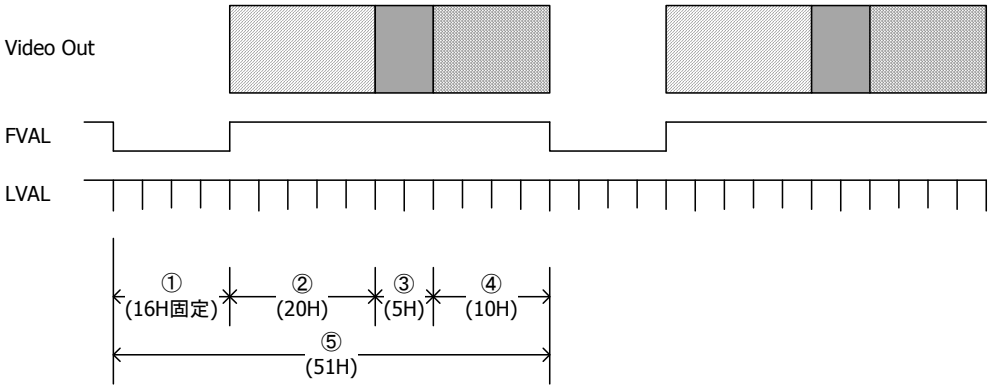
7. **Partial Scan Mode**

☐ Maximum 8 partial areas can be set by serial commands.

Example : 3 partial areas to be set.





① : 16H fixed
② : Partial Area 1 : 20H
③ : Partial Area 2 : 5H
④ : Partial Area 3 : 10H

☐ When setting several partial scan areas, please set the start position and effective lines trying not to overlap the areas.

☐ When setting several areas, please set the areas in the numerial order of start position.

☐ Entire frame line numbers = **V blanking line numbers (16H fixed)** ＋
Partial effective lines 1 + Partial effective lines 2 ＋ ･･･ + Partial effective lines 8

Note that "Sum total of partial effective line numbers (expect V blanking lines) < **2048**" should be met.

☐ Frame rate = 1 / (Entire frame line numbers × Time for 1 line)

8. Remote Communication

Via camera link cable, the camera can be controlled.

Communication Settings	
Baud Rate	: 9600bps (Initial Setting)
Data	: 8bit
Stop bit	: 1bit
Parity	: None
XON / XOFF	: No Control

- Send Command Format （Host to Camera）

If send a command, set the command and parameter between STX and ETX.

STX (02H)	command (2byte)	parameter (ASCII code) (20H-7FH)	ETX (03H)

- Return Command Format（Camera to Host）

Normally, a camera returns a control code which is ACK or NAK.

If return value has a text message, the message is between STX and ETX.

ACK (06H)	··· Succeed

NAK (15H)	··· Fail

STX (02H)	command (2byte)	parameter (ASCII code) (2FH- 7FH)	ETX (03H)	··· return message

Fail ··· NAK

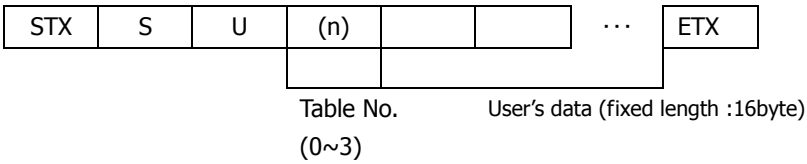
【Remarks】

The command gets some value of register of the specified address. The number of the acquisition is between '0' and 'F'（ Hexadecimal ）.

If appoint '0' at the address, the command send data of 16 address. If the command is omitted at the address, the command send an address.

3) Set User's data

【Command】 Set : User's data



【Return Value】

Succeed	···	ACK
Fail	···	NAK

【Remarks】

The commands, sets free data on the specified register, and can use 4 tables (1 table : 16 characters).

4) Get User's data

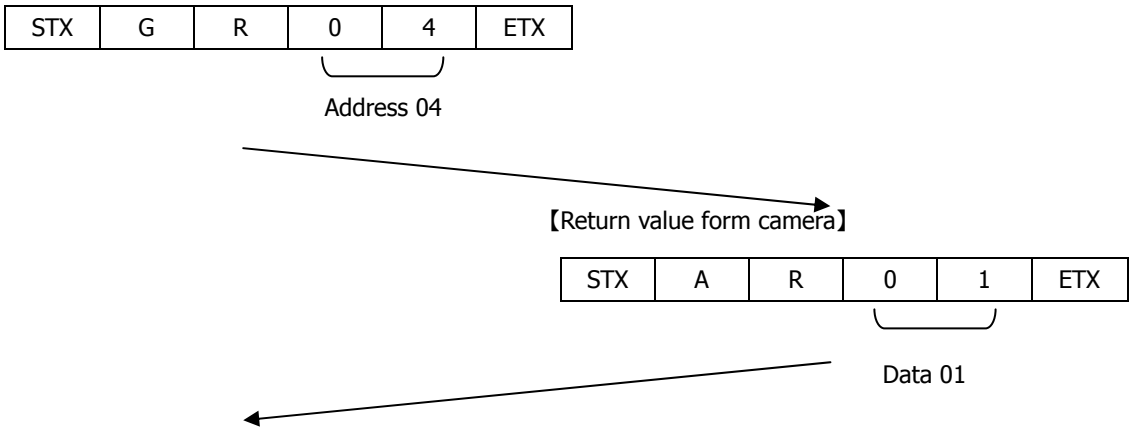
8.2. Control Example

1) How to check trigger shutter mode. (The command gets a value from address 04)

【Send Command】

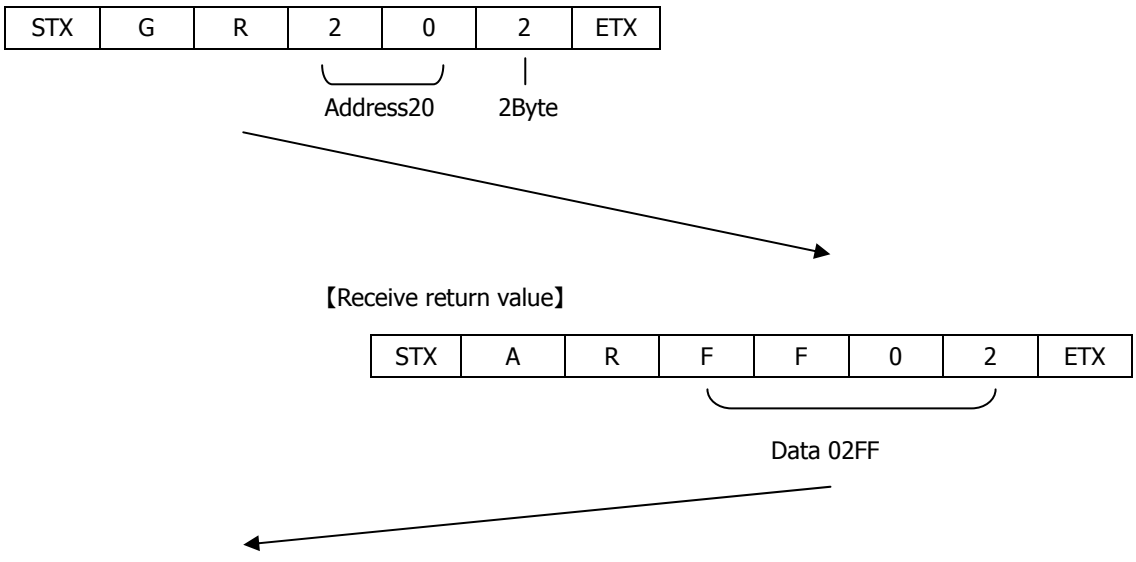


【Receive Return Value】

The camera is working with a trigger shutter mode, because the command received a 01 from the camera.

2) How to check trigger shutter mode. (The command gets consecutive 2 bytes values from address 20)

【Send Command】



【Receive return value】

The shutter mode of camera is working +12dB, because the command received a 02FF(767) from the camera.

3) How to set partial scan mode. (The command sets 01 for address 08)

【Send Command】

STX	S	R	0	8	0	1	ETX

Address 08 Data 01

【Return value form camera】

ACK

【Receive Return Value】

The command finished normally, because the command received ACK from the camera.

4) How to set 01FF for manual shutter. (The command set 01FF for address 24)

【Send Command】

STX	S	R	2	4	F	F	0	1	ETX

Address 24 Data 01FF

【Return value form camera】

ACK

【Receive Return Value】

The command finished normally, because the command received ACK from the camera.

5) How to save configurations of a camera. (The command send CS)

【Send Command】

STX	C	S	ETX

【Return value form camera】

ACK

【Receive Return Value】

The command finished normally, because the command received ACK from the camera.

6) How to restore the camera to initial settings. (The command send CR)

【Send Command】

STX	C	R	ETX

【Return value form camera】

ACK

【Receive Return Value】

The command finished normally, because the command received ACK from the camera.

7) How to get detail of a communication error.

【Send Command】

STX	G	R	@	0	ETX

Set the address invalid value

【Return value form camera】

NAK

【Receive return value】

The command finished abnormally, because the command received 'NAK' from the camera.

When the command did not finish normally, retry to send command or send to get detail of a detail error command.

【Send Command】

STX	Q	E	ETX

【Return value form camera】

STX	R	E	1	0	2	ETX

Kind1 Detail 02

【Receive Return Value】

The 'GR' command accessed invalid address , because the error command received kind '1' and detail '02'.

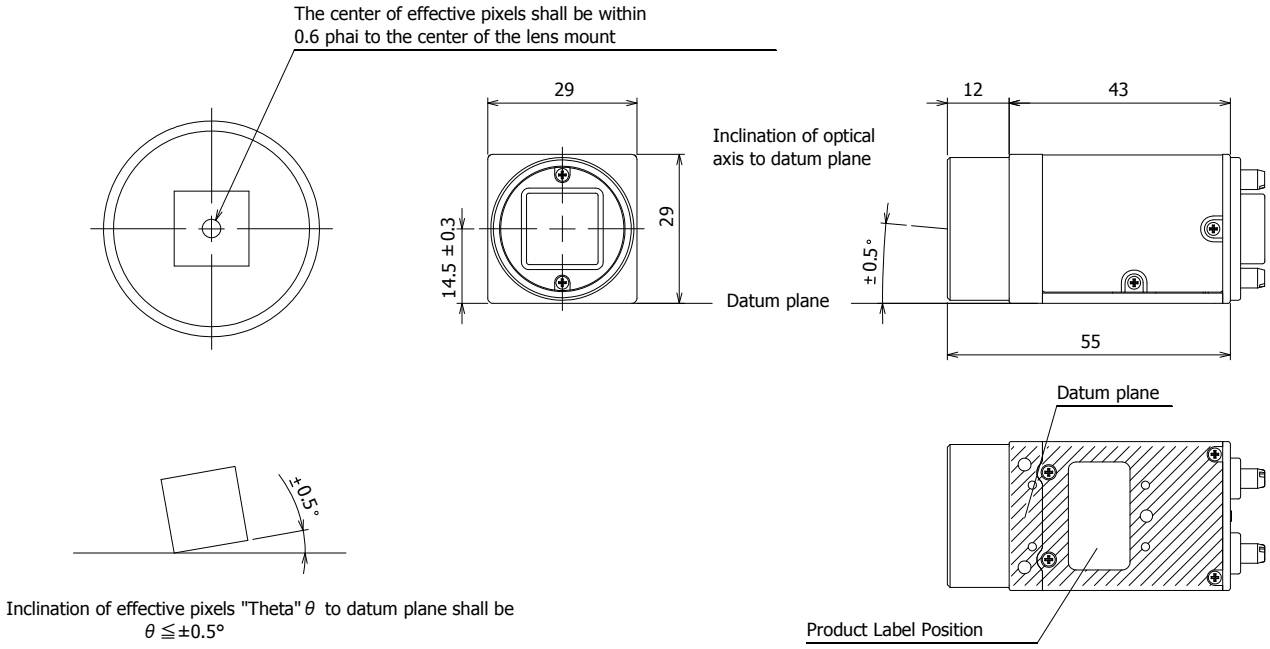
10. **CMOS Optical Axis Accuracy**



Inclination of effective pixels "Theta" θ to datum plane shall be
$\theta \leqq \pm 0.5°$

11. **Dimensions**

*1) Screw length from the lens mount surface shall be under 6mm.
And protruding portion shall be less than 10mm.

*2) C mount screws comply with ANSI/ASME B1.1,1-32UN(2B).

13. **Cases for Indemnity (Limited Warranty)**

We shall be exempted from taking responsibility and held harmless for damage or losses incurred by the user in the following cases.

- In case damage or losses are caused by fire, earthquake, or other acts of God, acts by third party, deliberate or accidental misuse by the user, or use under extreme operating conditions.
- In case indirect, additional, consequential damages (loss of business interests, suspension of business activities) are incurred as result of malfunction or non-function of the equipment, we shall be exempted from responsibility for such damages.
- In case damage or losses are caused by failure to observe the information contained in the instructions in this product specification & operation manual.
- In case damage or losses are caused by use contrary to the instructions in this product specification & operation manual.
- In case damage or losses are caused by malfunction or other problems resulting from use of equipment or software that is not specified.
- In case damage or losses are caused by repair or modification conducted by the customer or any unauthorized third party (such as an unauthorized service representative).

14. **CMOS Pixel Defect**

IDULE compensates the noticeable CMOS pixel defects found at the shipping inspection prior to our shipment. On very rare occasions, however, CMOS pixel defects might be noted with time of usage of the products.

Cause of the CMOS pixel defects is the characteristic phenomenon of CMOS itself and IDULE is exempted from taking any responsibilities for them. Should you have any questions on CMOS pixel defects compensation, please contact us.

15. **Product Support**

When defects or malfunction of our products occur, and if you would like us to investigate on the cause and repair, please contact your distributors you purchased from to consult and coordinate.
