2. Handling Precautions

The camera must not be used for any nuclear equipment or aerospace equipment with which mechanical failure or malfunction could result in serious bodily injury or loss of human life. Our warranty does not apply to damages or defects caused by irregular and /or abnormal use of the product.

Please observe all warnings and cautions stated below.

Our warranty does not apply to damages or malfunctions caused by neglecting these precautions.

Do not use or store the camera in the following extreme conditions :

- Extremely dusty or humid places.
 - Extremely hot or cold places (operating temperature -5°C to +45°C).
 - Close to generators of powerful electromagnetic radiation such as radio or TV transmitters.
 - Places subject to fluorescent light reflections.
 - Places subject to unstable (flickering, etc.) lighting conditions.
 - Places subject to strong vibration.
-
- Remove dust or dirt on the surface of the lens with a blower.
 - Do not apply excessive force or static electricity that could damage the camera.
 - Do not shoot direct images that are extremely bright (e.g., light source, sun, etc.), and when camera is not in use, put the lens cap on.
 - Confirm the mutual ground potential carefully and then connect the camera to monitors or computers.
AC leaks from the connected devices may cause damages or destroy the camera.
 - Do not apply excessive voltage. (Use only the specified voltage.) Unstable or improper power supply voltage may cause damages or malfunction of the camera.
 - The voltage ripple of camera power DC +12V±10% shall be within ±50mV. Improper power supply voltage may cause noises on the video signals.

5.10. Fixed Trigger Shutter Mode

- ☐ This is the mode to start exposure with external input trigger signals, and set the exposure time with serial commands.
- ☐ Delay time (Exposure Time Delay) from detecting trigger edge in the camera to starting exposure.
- ☐ Triggers can be accepted even when outputting video signals.
However, trigger signals for exposure to start the next video output prior to the completion of video transmission for the prior video output signals can not be accepted.
- ☐ Trigger input during exposure time should be ignored. (Refer to the below A)
- ☐ The delay time is fixed with the Trigger Hsync Mode ON.
However, if you use inputting the trigger signals for exposure to start the next video output prior , the line noise appears occasionally by the trigger timing.

Trigger Hsync mode : (Address:17h)	OFF(Data:0)	ON(Data:1) [Factory setting]
Exposure Time Delay (a)	Exposure Delay 0 	Exposure Delay max1HD 2Tap : max 34.207us 3Tap : max 25.655us 4Tap : max 17.103us 8Tap : max 8.552us
LVAL signal before rising of FVAL (b)	 The length of LVAL of point (b) is variable.	 LVAL length is always fixed.

5.11. Pulse Width Trigger Shutter Mode

- ☐ This is the mode to start exposure with external input trigger signals, and set the exposure time with pulse width of the trigger signals.
- ☐ Delay time (Exposure Time Delay) from detecting trigger edge in the camera to starting exposure, and from detecting trigger end edge to completing exposure.
- ☐ Pulse width is min. 2HD (min) to approx. 2 frames.

Functionally, there is no upper limitation, but noises such as dark noises and shadings may be noticeable at long time exposure.

- ☐ Triggers can be accepted even when outputting video signals.

However, trigger signals for exposure to start the next video output prior to the completion of video transmission for the prior video output signals can not be accepted.

- ☐ The delay time is fixed with the Trigger Hsync Mode ON.

However, if you use inputting the trigger signals for exposure to start the next video output prior , the line noise appears occasionally by the trigger timing.

Trigger Hsync mode : (Address:17h)	OFF(Data:0)	ON(Data:1) [Factory setting]

(Example : Effective line :20 lines)

- ① : 64 lines fixed
- ② : Partial Area : 20 lines
- ③ : Total frame line : 84 lines

- ☐ Total number of frames = Number of V blanking lines (fixed to 64H) + Number of partially valid lines
(Partial scan start position + number of partial valid lines) <= 5120 must be satisfied.

- ☐ Partial scan start position and number of partial effective lines

B&W : n x 1 LINE

Color : n x 2 LINE
